

## **Project 2 - Advance E-Commerce Website**

- **ABSTRACT**

Project is to develop a Advance E-commerce Website. The theme used in this project is of a marketing, consultancy and courses providing company e-commerce site (*DevelopersGrace*). The web page can be divided into 3- section namely,

- I. The navigation bar
- II. The middle section(Multiple pages)
- III. Address section

The navigation bar includes options for user to navigate through the site and use the services available.

The middle section tells to the users about seller. It specifies the purpose of the site, services available to the user and many more

The address section provides address/contacts details of the outlets of the seller, social links, etc.

- **OBJECTIVE**

To develop an E-commerce site which offers marketing consultancy and web development tools to the users with the help of web development languages like HTML, CSS and Javascript, a working E-commerce page is to be developed.

It serves as a training website where learners can join and learn multiple courses like python programming, Machine learning and get job opportunities.

Primary objectives includes user friendly experience must be served to the user and the site must delivers attractive view to the user as well.

- **INTRODUCTION**

This project is about development of an E-commerce website given the name as **DevelopersGrace** which is a marketing site and provides web development services:

The development languages used in the projects are as follows:

Web development refers to the creating, building, and maintaining of websites. It includes aspects such as web design, web publishing, web programming, and database management. It is the creation of an application that works over the internet i.e. websites.

The word Web Development is made up of two words, that is:

Web: It refers to websites, web pages or anything that works over the internet.

Development: It refers to building the application from scratch.

HTML: HTML stands for Hyper Text Markup Language. It is used to design the front end portion of web pages using markup language. It acts as a skeleton for a website since it is used to make the structure of a website.

CSS: Cascading Style Sheets fondly referred to as CSS is a simply designed language intended to simplify the process of making web pages presentable. It is used to style our website.

JavaScript: JavaScript is a scripting language used to provide a dynamic behavior to our website.

- **METHODOLOGY**

The Project is developed by using general model which is normally used in development projects.

The sequential phases in model are –

**Requirement Gathering and analysis** – All possible requirements of the system to be developed are captured in this phase and documented in a requirement specification document.

**System Design** – The requirement specifications from first phase are studied in this phase and the system design is prepared. This system design helps in specifying hardware and system requirements and helps in defining the overall system architecture.

**Implementation** – With inputs from the system design, the system is first developed in small programs called units, which are integrated in the next phase. Each unit is developed and tested for its functionality, which is referred to as Unit Testing.

**Integration and Testing** – All the units developed in the implementation phase are integrated into a system after testing of each unit. Post integration the entire system is tested for any faults and failures

**Deployment of system** – Once the functional and non-functional testing is done; the product is deployed in the customer environment or released into the market.

**Maintenance** – There are some issues which come up in the client environment. To fix those issues, patches are released. Also to enhance the product some better versions are released. Maintenance is done to deliver these changes in the customer environment
